

HamiltonBuhl® 8-Position Bluetooth-Enabled Stereo Jackbox with Individual Volume Controls

JB8V-BT

The HamiltonBuhl® 8-Position 3.5mm Stereo Jackbox with individual volume controls delivers stereo sound for up to 8 students, and includes volume controls for personalized listening levels.

Constructed of heavy-gauge plastic, the durable 8-position jackbox is well-encased for school safety.

Connect the AUX IN to a media player with a 3.5mm plug, or use a Bluetooth-enabled device (smartphone, tablet, etc.) to send your signal wirelessly via Bluetooth® to the jackbox.

The JB8V-BT may be daisy-chained with up to 2 additional units via wire connection for a total of 24 listeners. (Note: Audio quality may be slightly degraded when daisy-chaining multiple units.)

A digital readout shows the unit's battery level, preventing the chance of running out of power while presenting.
